

HomePath — Mortgage Manager

User Guide

****Version:**** Full Version (Pro)

****Works in:**** Any browser — Chrome, Firefox, Safari, Edge

****Internet required:**** No — runs 100% offline

****Your data:**** Stays on your device. Nothing is sent anywhere.

Getting Started

1. Open the `HomePath-MortgageManager.html` file in any browser
2. You will see five tabs along the top: ****Overview****, ****Costs****, ****Maintenance****, ****Amortization****, and ****Report****
3. Start with the ****Overview**** tab and enter your mortgage details — everything else updates automatically

Your data is saved automatically in your browser. It will still be there the next time you open the file on the same device.

> ****Tip:**** Bookmark the file or pin it to your browser for quick access each month.

Tab 1 — Overview

This is your mortgage dashboard. Enter your details once and the app tracks everything from here.

What to fill in

Field	What to enter
-------	---------------

---	---
-----	-----

Property Value	Current estimated value of your home
---------------------------	--------------------------------------

Outstanding Balance	What you currently owe on your mortgage
--------------------------------	---

--	--

Monthly Payment	Your monthly mortgage payment amount
Interest Rate	Your current interest rate (e.g. 4.5)
Remaining Term	How many years are left on your mortgage
Deal Expiry Date	When your current fixed or tracker deal ends

What the app calculates

- **Loan-to-Value (LTV)** — your balance as a percentage of your property value
- **LTV Band** — shows whether you are above or below the key thresholds: 90%, 85%, 80%, 75%, 70%, 60%
- **Equity** — how much of your home you own outright
- **Total Interest Remaining** — the total you will pay in interest over the rest of your term
- **Monthly Payment Breakdown** — how much of each payment is interest vs capital

Deal expiry colour coding

Colour	Meaning
 Green	More than 90 days remaining
 Amber	90 days or fewer — time to start comparing deals
 Red	Deal has expired — you may be on your lender's Standard Variable Rate (SVR)

> **Why this matters:** SVR rates are typically 2–3% higher than fixed deals. One month on an SVR can cost more than the price of this app.

Tab 2 — Monthly Costs

See the true cost of owning your home — not just the mortgage.

How to use it

Add each regular cost using the input fields:

- **Mortgage** — auto-filled from your Overview details
- **Council Tax** — your monthly council tax amount
- **Buildings Insurance** — monthly premium
- **Contents Insurance** — monthly premium
- **Life / Mortgage Insurance** — monthly premium
- **Gas & Electricity** — monthly average
- **Water** — monthly bill
- **Broadband & Phone** — monthly cost
- **Maintenance Reserve** — recommended: 1% of property value per year, divided by 12
- **Other** — any other regular home costs

What you get

- **Total Monthly Cost** — the real number, everything included
- **Annual Total** — useful for budgeting and tax purposes
- A clear breakdown of where your money goes

> **Example:** A £250,000 home with a £1,100 mortgage might have a true monthly cost of £1,650 once all costs are included. Most homeowners significantly underestimate this figure.

Tab 3 — Maintenance Tracker

Log every item in your home with its warranty, service schedule, and repair history.

Adding an item

Click **Add Item** and fill in:

Field	Example
Item Name	Boiler

Category	Heating
Install / Purchase Date	15 March 2021
Warranty Expiry	15 March 2026
Next Service Due	15 October 2024
Notes	Annual gas safety certificate due same time

What to track

Common items to log:

- Boiler and central heating system
- Roof (last inspection date)
- Electrical system (last EICR certificate)
- Plumbing (stopcock location, last check)
- Windows and doors
- White goods (washing machine, fridge, dishwasher)
- Flooring
- Damp proofing
- Smoke and CO alarms

Adding repair costs

For each item you can log individual repairs:

1. Click on the item
2. Select **Add Cost**
3. Enter the date, description, and amount

This builds a complete repair history — useful for insurance claims, selling your home, and tracking which items cost the most over time.

Status indicators

Status	Meaning
 OK	Warranty valid, service not due
 Due Soon	Service due within 30 days
 Overdue	Service overdue or warranty expired

Tab 4 — Amortization Schedule

See every single monthly payment broken down for the life of your mortgage.

What it shows

For each month you can see:

- **Payment number**
- **Opening balance**
- **Interest charged** that month
- **Capital repaid** that month
- **Closing balance**

Overpayment simulator

At the top of this tab, enter a monthly overpayment amount to see:

- **Months saved** — how much earlier you will pay off your mortgage
- **Interest saved** — the total interest you will avoid paying
- **New payoff date**

> **Example:** Overpaying £200 per month on a £200,000 mortgage at 4.5% with 20 years remaining saves approximately £18,400 in interest and cuts 4 years off the term.

How to use this for decisions

- Try different overpayment amounts to find the sweet spot for your budget
- Compare the interest saved against other uses of that money (ISA, pension top-up)

- Use the schedule to see how quickly you will cross the next LTV band

Tab 5 — Report

Generate a clean, printable PDF summary of your home finances.

What is included

- Your mortgage overview (balance, LTV, equity, deal expiry)
- Monthly costs summary
- Maintenance items due for attention
- Key figures from your amortization schedule
- Date and period covered

How to generate

1. Click ****Generate Monthly Report****
2. A print-ready page opens in a new tab
3. Press ****Ctrl + P**** (Windows) or ****Cmd + P**** (Mac)
4. Set destination to ****Save as PDF****
5. Save it anywhere on your device

Suggested routine

Run this report on the ****first of each month**** and save it to a folder named by year. This gives you a complete financial record of your home over time — useful for remortgaging, selling, or tax purposes.

Your Data

Where it is stored

All data is saved in your browser's local storage under the prefix `mm\_`. It stays on your device and is never sent to any server.

Backing up your data

1. Go to the **Overview** tab
2. Click **Export Data**
3. A JSON file will be saved to your downloads folder

Keep this backup in a safe place (cloud storage, external drive). If you clear your browser data or move to a new device, you will need this file to restore your information.

Restoring from a backup

1. Open HomePath
2. Go to **Overview**
3. Click **Import Data**
4. Select your saved JSON backup file

Moving to a new device

1. Export your data on the old device
2. Copy both the `HomePath-MortgageManager.html` file and the JSON backup to your new device
3. Open the HTML file in a browser
4. Import the JSON backup

Tips for Getting the Most from HomePath

Update once a month

Spend 5 minutes at the start of each month updating your balance, checking the maintenance log, and running the report. The whole picture in under 5 minutes.

Set a deal expiry reminder

As soon as you take out a new mortgage deal, enter the expiry date. Start comparing new deals 3 months before expiry to avoid falling onto the SVR.

****Use the maintenance log before you sell****

A complete service history for your home is a genuine selling point and can support your asking price. Estate agents and buyers respond well to documented maintenance records.

****Track your LTV progress****

Each time you make a mortgage payment, your LTV drops slightly. When you cross a new band (80%, 75%, 70%), speak to a mortgage broker — you may be entitled to a significantly better rate.

****Overpay when you can****

Even small overpayments compound significantly over a 25-year mortgage. Use the simulator to see exactly what an extra £50 or £100 per month would do.

Support

Having trouble or have a question?

****Email:**** bensaa123@gmail.com

We respond to all queries promptly.

****Try the free version:**** automationhire.co.uk/mortgage-manager

HomePath — Mortgage Manager is a single-file offline application. No data ever leaves your device.
